Gas Smoker Accessories

Refer to model pages for availability.

Drain pan with hose for cleaning - Full size, 6" (152mm) deep polycarbonate pan with a 1" ID ball valve and 10' (3048mm) of hose. The pan is placed under the drain on the smoker and the hose is ran to the grease trap, or to floor drain that runs to a grease trap. This allows the smoker to be cleaned and the dirty water and cleaning solutions to run to the grease trap. **This is only used for cleaning and should not be used to capture hot grease.**

Smoke extractor damper - Stainless steel motorized damper that activates when the product door is opened, or when the down arrow is pressed (optional cook and hold control only). The smoke extractor damper works in conjunction with the roof exhaust fan (**not provided**) to pull the smoke out of the smoker as the product doors are being opened.

Product shelf - 12" (305mm) deep stainless steel shelf on the front of the smoker, below the control panel, that allows product or utensils to be placed for easier loading and unloading.

Lockable control panel cover - Stainless steel sides with a Plexiglas front and a locking mechanism that allows the cover to be locked to prevent tampering with the control.

Delivery casters - 6" (152mm) casters are inserted in place of the smoker's permanent legs and are used to lower the smoker and allow for easier maneuvering during shipping and installation.

Through the wall insulation kit - When installing a smoker through a wall of combustible material an insulation kit must be used. The non combustible ceramic fiber board must be installed between the smoker and the combustible material. The kit consists of 1" (25mm) thick, 8" (203mm) wide, boards that are installed on the top and each side of the smoker.

Through the wall trim kit - A stainless steel trim kit that covers the gap between the smoker and the wall on all four sides of the smoker. The trim kit is only for one side of the building; two can be used for the interior and exterior of the building.

Competition package - The package consists of a moisture infusion system, gas cut-off switch and charcoal firebox insert. The moisture infusion system is a 3 gallon (11 liter) plastic container that attaches to the back of the smoker and uses a gravity drip system to drip liquid onto the top of the firebox and produce steam. **Only non-flammable liquid should be used.** The gas cut-off switch shuts the gas off to the burner, but still allows the burner blower motor to run and stoke the fire in the firebox. The charcoal firebox insert is a mild steel vented container that allows charcoal to be placed in the firebox.

Mobile rack retainer pins and clips - Stainless steel pins and clips are inserted through the each side of the product rack hangers and product racks and hold the product racks in place during transit.
